

# CONCORD WATER DRINKING WATER NOTICE

## YOUR PROPERTY IS SERVED BY A WATER SERVICE LINE THAT MAY BE LEAD

*This notice contains important information about your drinking water.  
Have someone translate it for you or speak with someone who understands it.*

Dear Customer,

Water systems are now required to inventory all water service line materials and identify any water service line containing lead or lead materials. Concord Water's most recent inventory has determined that your service line – the water pipe that connects your home from the water main – is of unknown material classification. **“Unknown” means that the service line could be lead.** This documentation is part of the Town's compliance with the Lead and Copper Rule Service Line Inventory regulatory requirements.

Updates are provided on the website: [concordma.gov/3771/Water-Service-Line-Inventory/](https://concordma.gov/3771/Water-Service-Line-Inventory/). Information on the health effects of lead and steps to reduce your exposure is included.

### UNTIL THE MATERIAL OF YOUR SERVICE LINE IS CONFIRMED AND ANY LEAD IS REMOVED, USE THE FOLLOWING STEPS TO REDUCE EXPOSURE TO LEAD IN DRINKING WATER

- **Run your water to flush out lead.** Lead levels increase over time as water sits in lead-containing plumbing materials. Using water for purposes other than drinking or cooking first, like laundry or bathing, can help reduce lead levels in drinking water.
- **Use only cold, fresh water for drinking, cooking, and preparing baby formula.**
- **Run the water for at least 1 minute** or until after it turns cold.
- **Do not boil water to remove lead.** Boiling water does not remove lead.
- **Clean your aerator.** Regularly clean your faucet's screen (also known as an aerator). Sediment, debris, and lead particles can collect in your aerator. Lead particles can release lead into your water. See how to clean your aerator at [www.epa.gov/system/files/documents/2023-12/important-resources-for-safe-drinking-water.pdf](https://www.epa.gov/system/files/documents/2023-12/important-resources-for-safe-drinking-water.pdf).
- **Use your filter properly, if you use a filter.** Filters can reduce lead in drinking water. Make sure it is certified by NSF to remove lead; packaging will show NSF logo. Follow directions to properly install, use, and replace your filter. Do not run hot water through the filter. For more information, and which certifications to look for, visit [www.epa.gov/water-research/consumer-tool-identifying-point-use-and-pitcher-filters-certified-reduce-lead](https://www.epa.gov/water-research/consumer-tool-identifying-point-use-and-pitcher-filters-certified-reduce-lead).
- **Identify and replace plumbing fixtures** containing lead and any copper piping with a lead solder, the material used to combine pipes. Also, Concord Water recommends replacing any faucets used for drinking that were installed prior to January 2014, as the allowable lead was reduced from 8% to 0.25%.
- **Have your child's blood tested for lead.** Children are at higher risk from the health effects of lead. If you would like to have your child tested, contact your health care provider, or local state health department here: 617-624-6000, or visit [www.mass.gov/orgs/childhood-lead-poisoning-prevention-program](https://www.mass.gov/orgs/childhood-lead-poisoning-prevention-program).
- **Have your water tested for lead.** You cannot see, taste, or smell lead in drinking water. Contact Concord Water for more information and how to get your water tested by a state-certified laboratory. See the list of labs here: [www.mass.gov/how-to/find-a-certified-laboratory-for-water-testing](https://www.mass.gov/how-to/find-a-certified-laboratory-for-water-testing).

### HEALTH EFFECTS OF LEAD

*There is no safe level of lead in drinking water. Exposure to lead in drinking water can cause serious health effects in all age groups, especially pregnant people, infants (both formula-fed and breastfed), and young children. Some of the health effects to infants and children include decreases in IQ and attention span. Lead exposure can also result in new or worsened learning and behavior problems. The children of persons who are exposed to lead before or during pregnancy may be at increased risk of these harmful health effects. Adults have increased risks of heart disease, high blood pressure, kidney or nervous system problems. Contact your health care provider for more information about your risks.*

CONCORD PUBLIC WORKS  
WATER & SEWER DIVISION  
135 KEYES ROAD  
CONCORD, MA 01742

Please read the full notice for information on how to reduce exposure to lead and opportunities to replace lead service lines. For more information, Concord Water visit <https://concordma.gov/lead> or call 978-318-3250.

### **OPPORTUNITY TO VERIFY LEAD SERVICE LINE MATERIALS**

Concord Water will be conducting inspections using a vacuum excavation truck to determine the materials of unknown water service lines on one or both sides of the water shut off valve, usually located close to the edge of the roadway. You will be contacted when we are in your neighborhood.

To verify the material of your service line, visit [concordma.gov/3771/Water-Service-Line-Inventory/](https://concordma.gov/3771/Water-Service-Line-Inventory/).

To learn more about lead in drinking water, visit: [www.mass.gov/lead-in-drinking-water](http://www.mass.gov/lead-in-drinking-water).

For more information, or if you have questions on how to verify the material of your service line, call Concord Water at 978-318-3250, or visit: [concordma.gov/lead](https://concordma.gov/lead).

***Please share this information with all the other people who drink this water at this address, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.***
